STAGE 2: BITCOIN EARLY GROWTH – 2011 SCORES06

Model: GPT-5.3 | Run: 2 | Timestamp: 2026-03-19 03:28 UTC
Replicator Invariance Test (RIT): The protocol rules described in the *Bitcoin whitepaper (2008)* and discussed in 2011 *bitcointalk.org* threads show that independently run nodes verify blocks using shared consensus rules, allowing the ledger to replicate without a central operator.
Calibration Check: The system appears strongly market-driven compared with centrally directed systems (USSR anchor) and resembles open price discovery environments (USA/VOC anchors) while maintaining low governance density.
Rule-13 Proxy %: **43.4** (D1=5.0, G1=1.0 driving)
Raw X: **6.29** | Final Y: **-1.89** (post-shim)
Basin: Open Market Replicator
Longevity window: 3–15 years
Drift from Bitcoin 2009 Genesis: Moderate shift toward exchange-mediated activity visible through 2011 Mt. Gox trading and discussion in 2011 *bitcointalk.org* threads.
Temporal Integrity: PASS

FULL CANONICAL 35-METRIC SCORES

A–G: Economic Metabolism (X Axis)

Metric	Score	Rationale (2011 evidence)
A1 Property rights	**9.0**	Coins are controlled by private keys as described in the *Bitcoin whitepaper (2008)* and reinforced in 2011 *bitcointalk.org* discussions emphasizing user custody.
A2 Market allocation	**8.5**	Price discovery occurs through voluntary exchange activity such as 2011 trading on Mt. Gox referenced in contemporaneous articles and forum posts.

A3 Profit motive	**8.0**	Mining rewards and exchange trading incentives discussed on *bitcointalk.org* in 2011 show strong profit-seeking participation.
B1 Redistribution	**9.0**	The protocol distributes coins through mining rewards without redistributive mechanisms according to the *Bitcoin whitepaper (2008)*.
B2 Welfare	**9.0**	No protocol features provide entitlements; participation remains voluntary as reflected in 2011 community discussions on *bitcointalk.org*.
C1 Heredity fidelity	**8.0**	Nodes enforce shared validation rules described in the *Bitcoin whitepaper (2008)* and discussed in 2011 client development threads.
C2 Variation	**6.0**	Discussion of different client builds and experimental services appears in 2011 *bitcointalk.org* threads.

C3 Persistence	**5.0**	The network has operated continuously since 2009 according to community reports on *bitcointalk.org*, though long-term durability remains uncertain in 2011.
D1 Exploitation tolerance	**5.0**	Speculative trading and mining competition visible in 2011 Mt. Gox activity show opportunities for advantage without clear systemic safeguards discussed in *bitcointalk.org*.
D2 Competition intensity	**7.0**	Mining pools and independent miners compete for block rewards as discussed in 2011 forum posts and mining guides.
E1 Survival pressure	**3.0**	The young network faces technical uncertainties and exchange volatility in 2011 discussions but remains small in scale.
E2 Niche construction	**6.0**	Developers and users actively build wallets, exchanges, and services discussed in 2011 *bitcointalk.org* threads.
F1 Boundary maintenance	**7.0**	Nodes enforce block validation rules defined in the *Bitcoin whitepaper (2008)* and discussed in 2011 development posts.

F2 Error repair	**2.0**	Bug fixes and client updates appear in 2011 developer threads, though repair relies on manual coordination rather than automated correction.
G1 Cheater detection	**1.0**	Fraud or misuse is mainly detected through community observation and forum reporting in 2011 rather than automated anomaly detection.
G2 Modularity	**5.0**	Wallet software, mining software, and node clients appear as separable components in 2011 development discussions.
G3 Information storage	**9.0**	The distributed blockchain ledger described in the *Bitcoin whitepaper (2008)* allows nodes to store transaction history independently.

H–M: Governance Density (Y Axis)

Metric	Score	Rationale (2011 evidence)
H1 Cultural uniformity	**-3.0**	Participants on *bitcointalk.org* in 2011 express diverse motivations including experimentation, ideology, and trading.

H2 Ideological monopoly	**-4.0**	Debate about economic philosophy and technical direction occurs openly on *bitcointalk.org* threads in 2011.
H3 Dissent suppression	**-3.0**	Criticism of protocol design and mining practices appears openly in 2011 forum discussions without systematic silencing.
I1 Family autonomy	**0.0**	Insufficient 2011 evidence relating protocol activity to family autonomy.
I2 Religious freedom	**0.0**	Insufficient 2011 evidence relating the protocol to religious expression.
I3 Artistic expression	**0.0**	Insufficient 2011 evidence connecting protocol governance to artistic freedom.
J1 Scientific direction	**6.0**	Development occurs through voluntary contributors and open discussion on *bitcointalk.org* rather than centralized research direction.
J2 Education indoctrination	**-2.0**	Technical documentation and tutorials shared on forums in 2011 emphasize practical instruction rather than ideological enforcement.

J3 Media control	**-5.0**	Independent bloggers and tech journalists publish varying views on Bitcoin in 2011 articles without central coordination.
K1 Military priority	**0.0**	Insufficient 2011 evidence of military allocation or involvement.
K2 Isolationism	**-6.0**	The protocol allows borderless participation according to the *Bitcoin whitepaper (2008)* and global user discussions on *bitcointalk.org*.
K3 External threat narrative	**-2.0**	Forum discussions in 2011 acknowledge regulatory uncertainty but do not consistently frame the system as under siege.
L1 Succession mechanism	**-3.0**	Development discussion in 2011 appears community-driven without formal hereditary leadership structure in *bitcointalk.org* threads.
L2 Leadership cult	**-1.0**	References to the protocol creator exist in 2011 discussions, but decision-making largely occurs through open community debate.

L3 Purge cycles	**-6.0**	No evidence in 2011 of organized removal or purging of participants from the ecosystem.
M1 Natalism	**0.0**	Insufficient 2011 evidence relating protocol governance to natal policy.
M2 Migration control	**-7.0**	Participation is open globally with no protocol restrictions, as emphasized in the *Bitcoin whitepaper (2008)* and 2011 forum discussions.
M3 Ethnic policy	**-8.0**	The system operates through cryptographic addresses without identity categories according to the *Bitcoin whitepaper (2008)*.

RED-TEAM CHECKLIST

Blind 2011 Analyst Test: ✓
Zero banned phrases: ✓
All citations 2011-public: ✓
No subconscious outcome bias: ✓
Shim triggers clean: ✓
RED-TEAM: **[5/5 | 0/5]**
Temporal Integrity: **PASS**

Memento mori. 🚀
==========

STAGE 2: BITCOIN EARLY GROWTH – 2011 SCORES — AUDIT
Model: GPT-5.3 | Audit Run: 1 | Timestamp: 2026-03-19 03:12 UTC

1. Chronology Gate Verification

Gate Test

1. Publication ∈ **2011-01-01 → 2011-12-31** ✓
2. No references to **post-2011 events or outcomes** ✓

Result: PASS
No statements in the scoring reference events, technologies, or protocol developments outside the allowed window.

2. Banned Phrase Scan

The following banned phrases were checked against the original scoring output:

- halving 2012
- 2012
- later
- would become
- block size
- SegWit
- Lightning
- ETF
- Mt. Gox hack
- Satoshi disappeared
- post-mortem
- hindsight

Occurrences detected: 0
Result: PASS

3. Blind 2011 Analyst Plausibility Test

Each narrative statement was tested against the rule:
Could a knowledgeable analyst writing on **31 December 2011** plausibly produce this sentence using only the allowed sources?

Statements Tested

RIT statement

"The protocol described in the Bitcoin whitepaper (2008) and discussed in 2011 bitcointalk posts appears capable of reproducing its ledger rules across independent nodes…"
Assessment:
✓ Supported by **Bitcoin whitepaper (2008)** and active 2011 discussions on **bitcointalk.org** regarding nodes validating blocks.

Calibration statement

"Economic metabolism appears strongly market-driven relative to state-directed systems…"
Assessment:
✓ Conceptual analytical comparison; no future knowledge implied.

Drift statement

"Moderate shift toward exchange-mediated market activity visible in 2011 Mt. Gox trading…"
Assessment:
✓ **Mt. Gox trading activity and price discovery were widely discussed in 2011** articles and bitcointalk threads.

Longevity window

"3–15 years"

Assessment:
⚠ This is **forward projection** but **not based on knowledge of later outcomes**. It remains a speculative forecast consistent with a 2011 analyst perspective.

4. Evidence Whitelist Audit

All cited evidence categories belong to the approved whitelist.

Evidence Used	Status
Bitcoin whitepaper (2008)	✓ allowed
bitcointalk.org discussions (2011)	✓ allowed
Mt. Gox exchange activity (2011)	✓ allowed
2011 tech/crypto articles	✓ allowed

No evidence outside whitelist detected.

5. Metric-Level Contamination Scan

Metrics checked for implicit future knowledge:

Metric	Score	Contamination Risk	Audit Result
D1 Exploitation tolerance	5.0	Exchange speculation known in 2011	PASS
G1 Cheater detection	1.0	No automated detection documented	PASS
F2 Error repair	2.0	Bug fixes discussed on forums	PASS
H3 Dissent suppression	-3.0	Forums open to debate in 2011	PASS
L2 Leadership cult	-1.0	No strong founder cult visible in 2011	PASS
C2 Variation	6.0	Multiple client discussions on bitcointalk	PASS

No score appears influenced by post-2011 protocol knowledge.

6. Arithmetic Verification

Recalculated using the locked Rule-13 formula.
Base = 15
Term1 = D1×2 = 10.0
Term2 = (10−G1)×2 = 18.0
Sub-sum = (F2 + H3 + L2 + C2) = 4.0

Term3 = 0.1×4.0 = 0.4
Total = **43.4**
Arithmetic confirmed correct.

7. Shim Trigger Audit

Shim conditions tested:

- SHIM 1 (D1 > 7) → **not triggered**
- SHIM 2 (G1 ≤ 0) → **not triggered**
- SHIM 3 (G1 < -5) → **not triggered**
- SHIM 4 (Y_final ≥ 1.5) → **not triggered**
- SHIM 5 (|s| > 8) → **not triggered**

Result: No shim activation required.

8. Subconscious Outcome Bias Check

Signals of hindsight bias were checked:

Bias Type	Result
Known future adoption	none
Known security incidents	none
Known governance conflicts	none
Known scaling debates	none

Result: PASS

9. Final Red-Team Checklist

Blind 2011 Analyst Test: ✓
Zero banned phrases: ✓
All citations 2011-public: ✓
No subconscious outcome bias: ✓
Shim triggers clean: ✓
RED-TEAM: [5/5 | 0/5]
Temporal Integrity: **PASS**

10. Audit Verdict

The **2011 Stage-2 scoring appears temporally clean**.
No detectable **precognition contamination** or **post-2011 inference leakage** was identified under the constraints of the whitelist and banned phrase rules.
The scorecard is **valid from a 31-Dec-2011 analytical viewpoint**.

Memento mori. 🚀
